COMPANY

The company was established in 1991 and originally specialized for projection and manufacturing of machinery especially for use in the glass industry. Company started to produce glass nail files from 1998. Since 1998 company has been continuously growing and successfully overcame the start of glass nail files production. Further development and improvement of technologies continued in following years.

The glass nail file is an ideal tool for essential nail care; it does not matter if the nails are natural or synthetic. A chemical process using acid etching creates abrasive surfaces. Thanks to a special modification of this technology, is reached equally soft and coarse surfaces. In combination with the characteristics of the raw materials it provides outstanding features almost impossible to recreate in other types of nail files.

We pay the highest attention to the quality and precision of manufacturing process. A major part of production is hand made in traditional ways and thanks to that we are able to run continuous quality control throughout the whole production process. Final quality controls guarantee the highest standard of quality for our products. We offer products, which share the finest of glazier and handcraft from a country, which prides itself on centuries of experience in traditional glass manufacturing.

The idea to use glass for the production of nail files is over 50 years old and originally came from Switzerland, where it was first patented. The production process used now is based on totally different technologies and that's why the current glass nail files are of the highest quality.

Raw material for the production of files – glass, doesn't contain any harmful substances. Czech State Health Institute in Prague certifies our products. According this testimonial our glass nail files meet the requirements for Health and Safety in accord with Czech law No. 20/1966 Sb., No. 22/1997 Sb. and No. 634/1992 Sb.

PRODUCTION TECHNOLOGY

For the production of our glass nail files we use the latest technologies hand in hand with traditional ways of glass manufacturing. Most of the production appliances were developed in our own research & development department.

The raw material for the glass files is flat glass, so called float. Using acid etching during the production the glass becomes coarse. The coarseness is made directly in the structure of the raw material and it eliminates falling out of abrasive grains, which could happen to other types of nail files. The quality of abrasive surface ensures outstanding grinding ability even on relatively delicate surface. The typical shape of the nail file is reached by traditional hand grinding. The final operation is hardening by a method of ion exchange which ensures greater strength and prolongs the files lifetime. The majority of files are after this final step decorated in one of our many styles.

MAIN CHARACTERISTICS

Function - Regarding the fact that abrasive surface is made by coarseness within the body of the file, it is impossible to find release and fall of grinding grains. This phenomenon occurs when individual grains of abrasive material are fixed to the surface of paper or metal. This is excluded in case of glass file and stability of function without loss of grinding ability is ensured.

Gentleness - With other types of files (especially metallic) we can often find brittleness and peeling of nails as result of their use. Regular use of glass file effectively prevents this unpleasant phenomenon unlike any other nail files and can dramatically improve condition of users nails.

Hygiene - With regard to the materials used this kind of file is ideal concerning hygiene. It is not porous like e.g. paper file and this fact excludes the absorption of moisture with bacterial or mildew germs. It is possible to disinfect the file in the usual ways, to boil or sterilize in autoclaves; this is very important for professional use to avoid transmission of infection among customers.

Firmness - Multiple increase of the firmness of basic material (glass) is achieved by hardening of glass-forming component by ion exchange. It ensures that the file does not crack by standard use. (Even non-harden glass endures normal agents affecting the file during nail treatment). The file can withstand being dropped on to common floor surfaces (carpet, linoleum...etc.). When dropped on to a hard surface (concrete, stone or ceramic pavement), it is possible that the file could get broken or damaged.

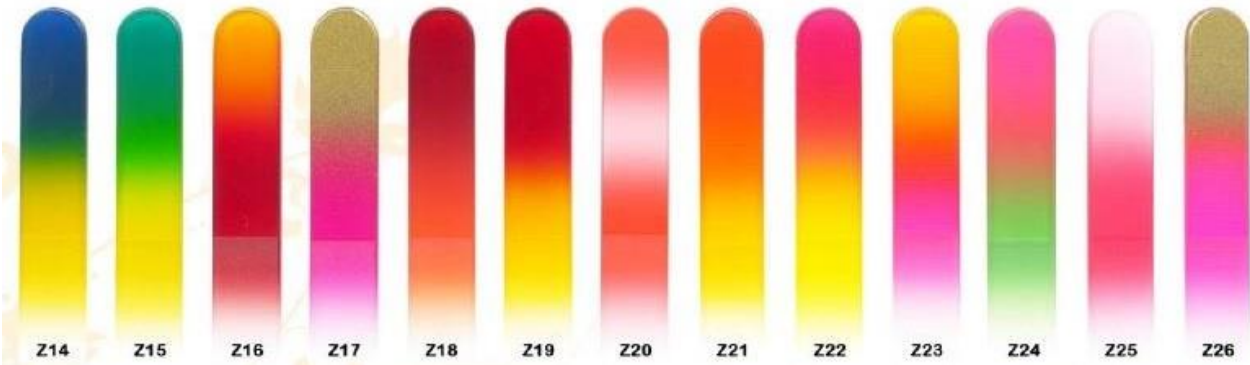

Lifetime - When used normally (nail treatment), the lifetime of the file is thanks to features of basic material and its hardening practically boundless.

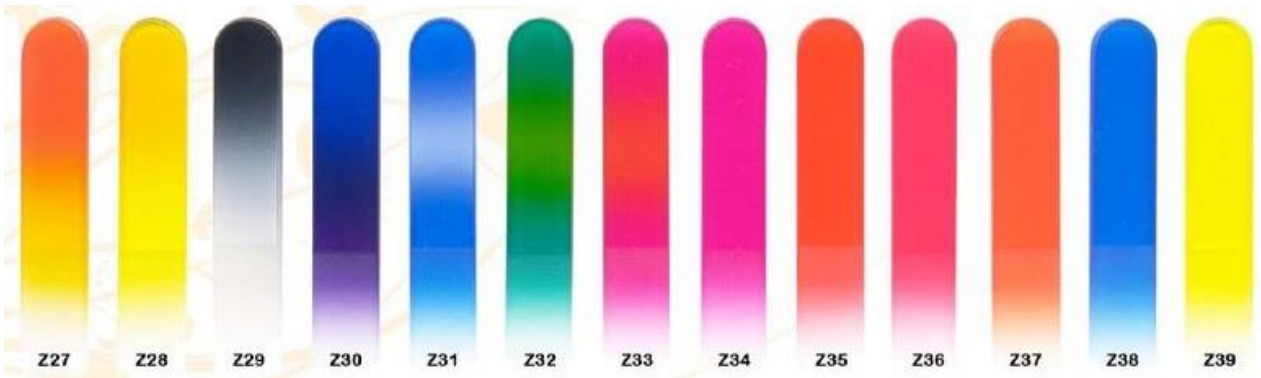

Safety - Should the file break (i.e. due to an exaggerated bend or impact), the edges of the file are almost always blunt, diminishing the possibility of an injury. However files damaged in any way should be set aside to avoid potential injury.

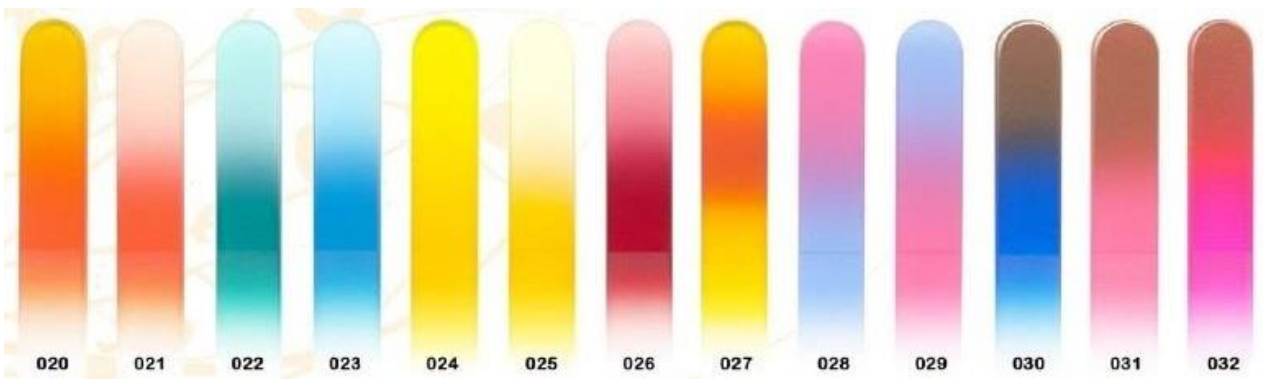

Versatility - Interesting point is versatility. Except for the treatment of nails it is possible to use the file to remove hardened skin around the nail and heel area. The best way is at first soften the skin by immersion in water and remove hardened skin with a proper tool, then finish with a glass file (the 195mm should be used for this purpose). It is also possible to use the file for the care of your pet's claws. Another use is a gentle grinding tool on the edges of wooden or plastic material - handy for your hobby when producing variety of models. Glass file is not intended for materials harder than glass (metals etc.).

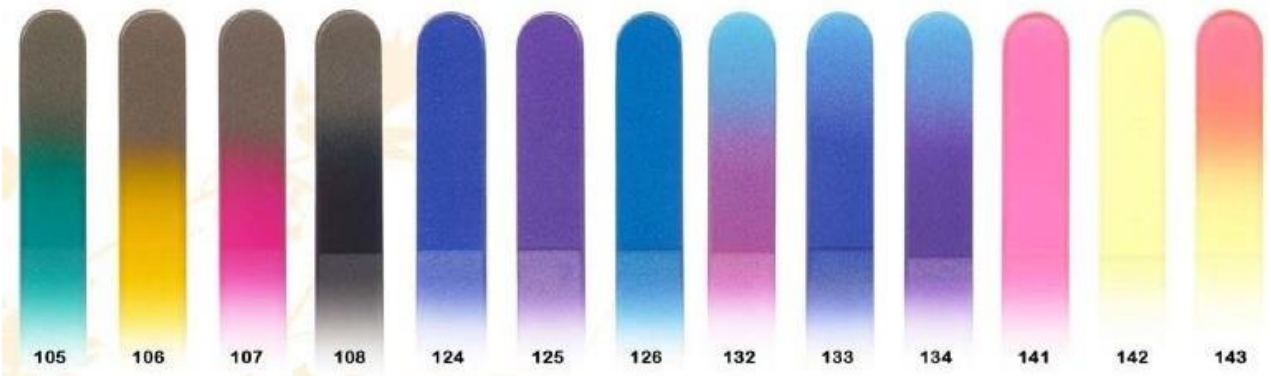

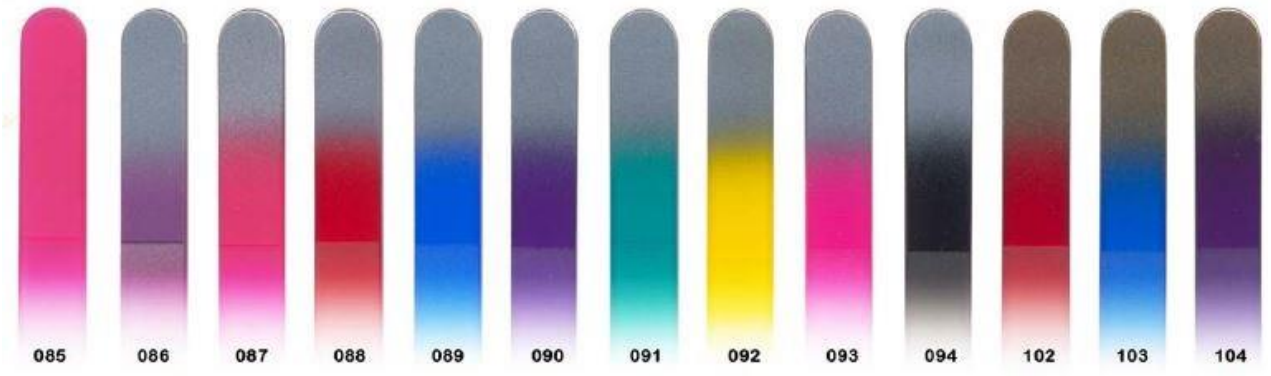

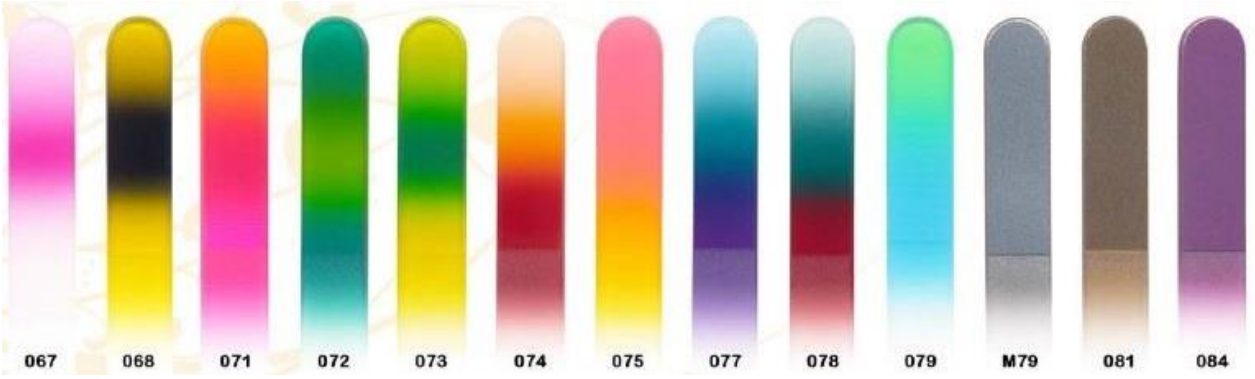

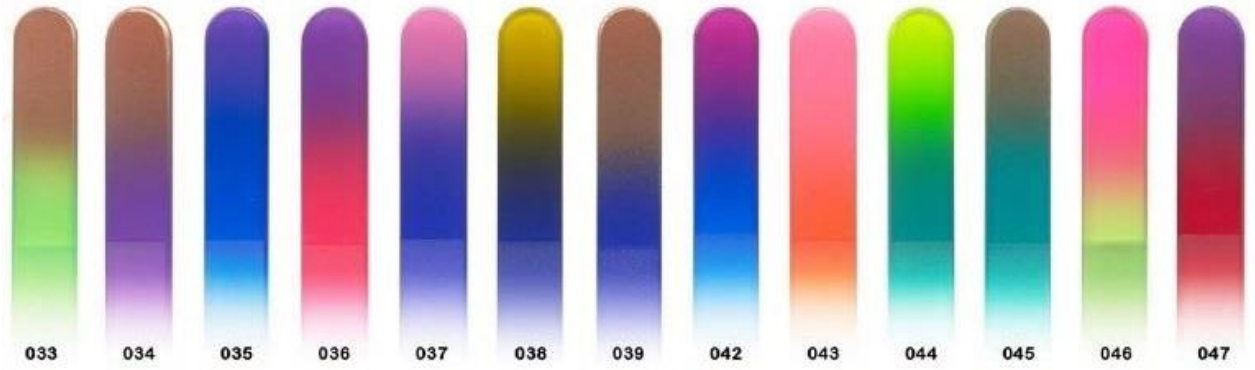

GLASS NAIL FILES - DECORATIONS – COLORATION

For decoration are used harmless baking colors. There can be one or more colors used on the file depending on its size. Color range is really wide, very nice is combination of basic color scale together with white or combination of two or three different colors.

GLASS NAIL FILES - DECORATIONS - SANDBLASTING

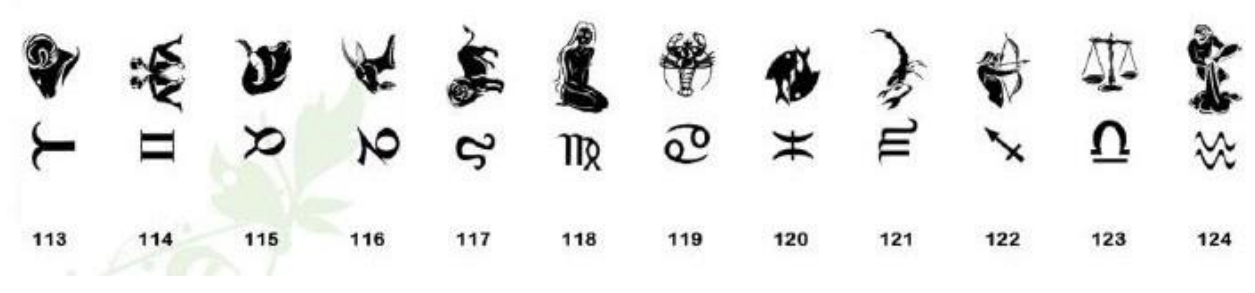

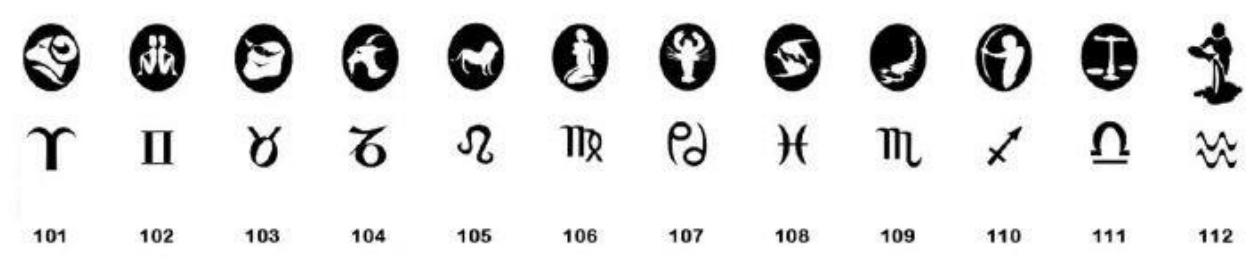

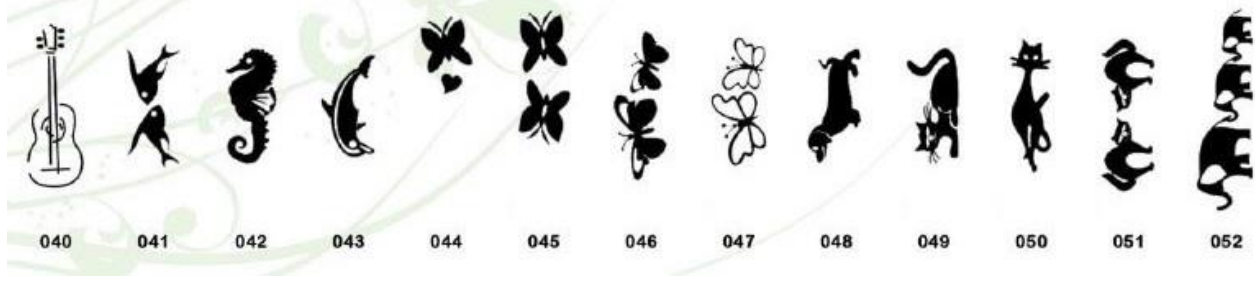

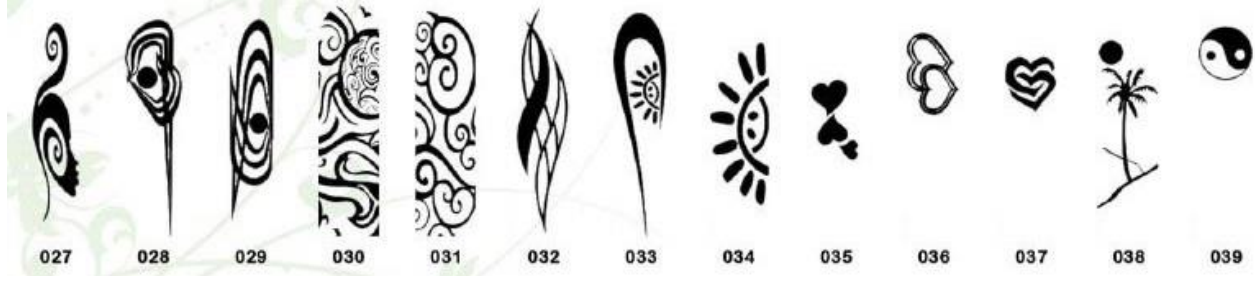

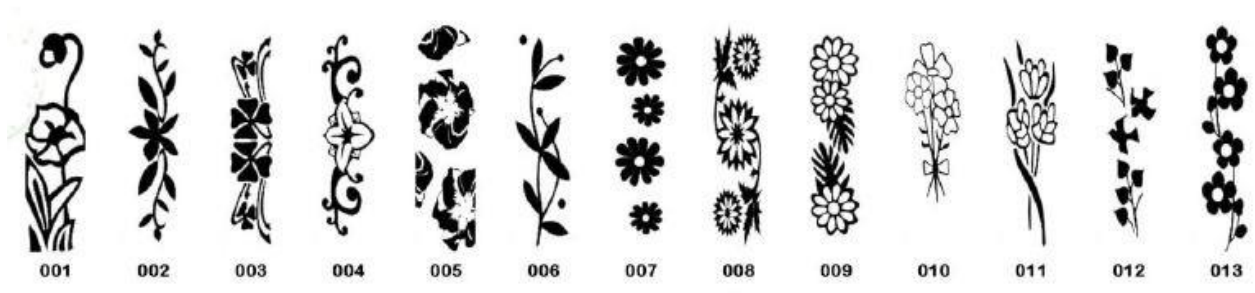

By sandblasting into the surface of a file there is created everlasting 3-D motive. Using this method it is possible to create a wide range of designs, for example, zodiac, motives of flowers, animals, different letters, lettering or company logos. Sandblasting can be combined with different colors according our wide range.

GLASS NAIL FILES - DECORATIONS - PRINTING

By printing is possible to create a lot of motives again – zodiac, flowers, animals, initial letters, company logos etc. Decorating by printing is mostly used for production of glass nail files used as marketing or advertising presents. The surface is possible to print by one or more colors. It is possible to use clear glass nail file but also the colored one.

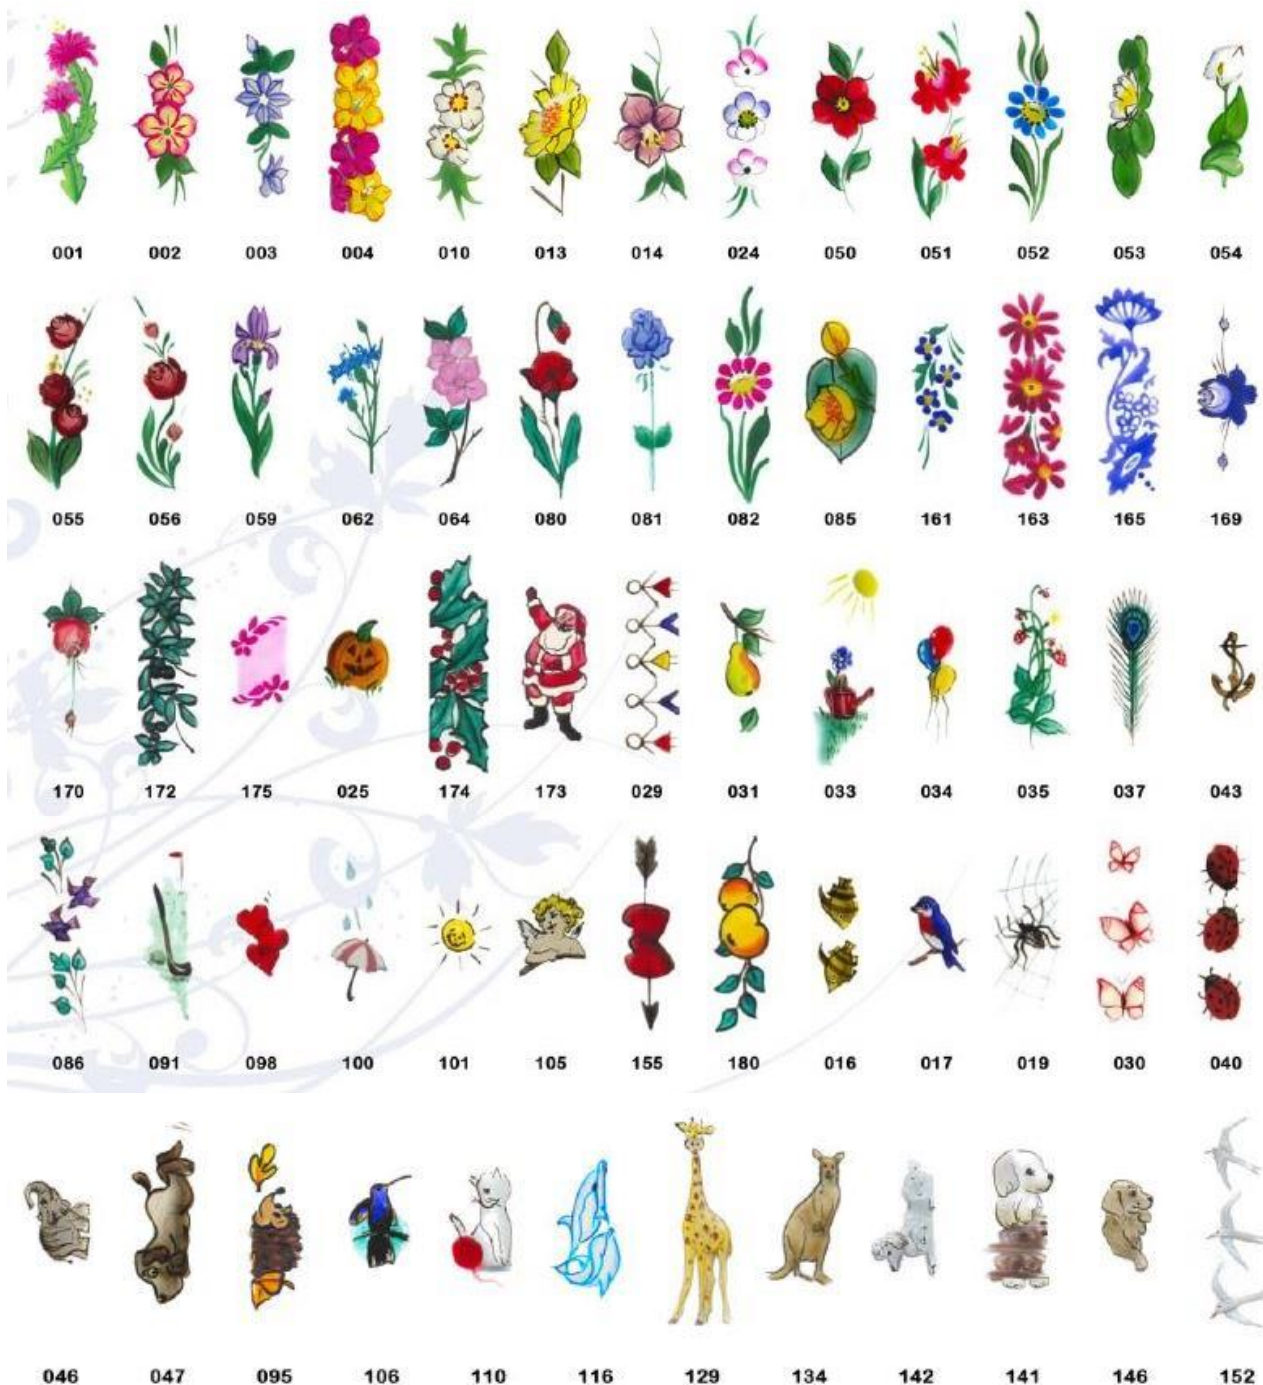

GLASS NAIL FILES - DECORATIONS - HAND PAINTING

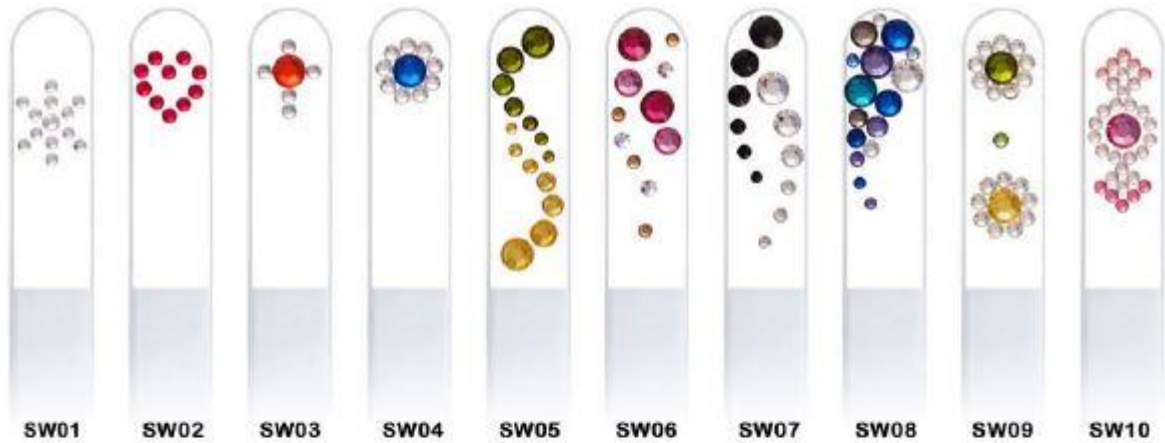

Hand painting is a specific decoration method to create on each file a unique and original piece of art. Variety of motives and colors is practically unlimited. In our catalogue you will find classic, modern, abstract motives.

GLASS NAIL FILES - DECORATIONS - SWAROVSKI

Small stones are stuck to the file using a special ultraviolet sticking technology. We use only the highest quality jewels from the prestigious brand Swarovski®. Decorations by artificial jewels make the files highly attractive and desirable. These files make an elegant gift or promotional items. This way of decoration is the best to combine with spray painting of one or more colors.

All showed motives we offer on clear glass nail files.

On clear files SW03 and SW04 motives is possible to choose the colour of central crystal. Offered colours of central crystals:

red - SW03-R, SW04-R

blue - SW03-B, SW04-B

green - SW03-G, SW04-G

We also offer SW04 - SW10 motives on the coloured files - colour of the crystal elements harmonises with the coloured base in this case. Offered colours of the base for the particular motives (according to book of colour patterns):

SW04 - Z09, Z34, Z38, Z41, Z45

SW05 - 001, 023, 044, 061, 067

SW06 - Z07, Z09, Z10, Z21, 042

SW07 - Z03, 006, 011, 022, 028

SW08 - Z40, Z43, Z44, Z45, Z46

SW09 - Z07, Z45, 011, 014, 044

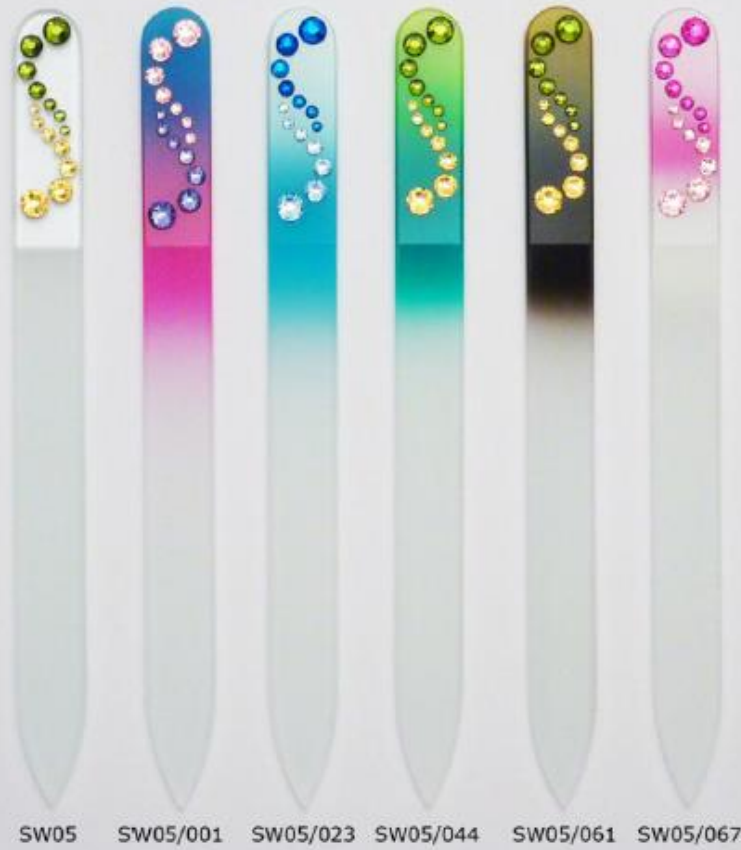

SW10 - Z09, Z11, Z19, Z29, 015

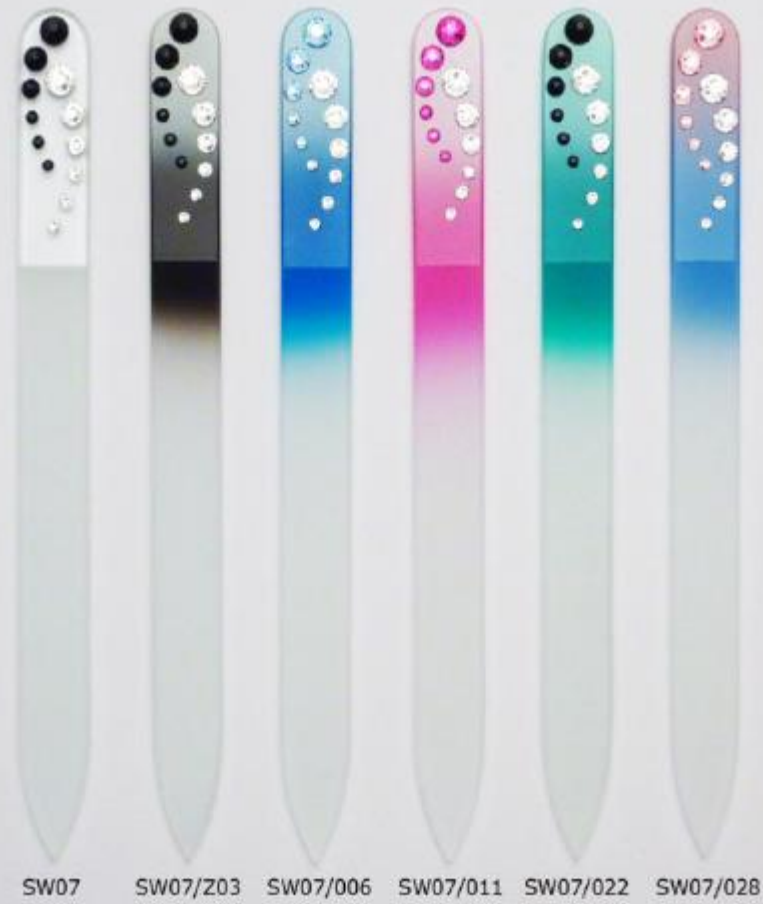

Displayed colours in catalogue could slightly differ from the real colours on the glass nail files.

GLASS NAIL FILES - DECORATIONS – SILVER

To the most demanding customers we offer decoration of files by silver. It is a unique technique, when using the special technology is on the file fixed 3-D motive made of real silver. The range of motives is very wide and extends from the traditional motives like zodiac or fancy letters up to sophisticated motives very close to real jewelry. This way of decoration is the best to combine with spray painting of one or more colors, eventually with decoration by artificial jewels.

POUCHES FOR GLASS NAIL FILES

We are using PVC clear pouches, PVC pouches with colored back side and pouches from synthetic velvet - black, blue, green and Bordeaux dark red colors.

GIFT BOXES

We offer different kinds of gift boxes for glass nail files.
